MILO · D7 PITCH

Agree the scope privately.
Know exactly what was approved.

Private commissioning workspace · one buyer · one merchant · one fixed-price three-image deal

No invented statistics · readiness dual-state published · receipts-only claims

PROBLEM

Fragmented coordination is the product gap

Quote in email. Confidential brief in a shared folder.

Approval in chat. Payment elsewhere.

Then: disagreement about which terms or which files were accepted.

Hypothesis (01-blueprint §1.1) — not measured demand

Buyers need price, scope, recipient, deadline, and consequences before authorizing.

Merchants need a bounded brief and an explicit approval — not a chat reaction.

BUYER PERSONA · ONE

Launch ops lead · e-commerce brand

UC-01: brand ↔ product photographer · three launch-ready product photos

Job-to-be-done

Commission a confidential three-image pack before a SKU drop.

Must see before authorizing

Price · scope · recipient · deadline · consequences

Must get after delivery

Clear approval record of which three files were accepted

Persona is a wedge hypothesis from the blueprint fit matrix — not signed demand.

PRODUCT

One order. Private terms. Public lifecycle.

PRIVATE (off-chain)

Price and commercial terms

Brief and creative files

Identities of parties (off-ledger)

Terms freeze after reserve; never published as ledger plaintext

PUBLIC (Midnight ledger)

Order phase

Hashed commitments

Who may advance which step

Inspectable by buyer, merchant, and independent re-query

That split is the product. Payment capture is external and separate from approval.

WORKFLOW

Agreement → delivery → approval

1. Buyer sees price, scope, recipient, deadline before authorizing
2. Merchant receives a bounded brief and accepts or declines
3. Merchant submits one identified three-image delivery
4. Buyer reviews files and records approval or a bounded dispute path
5. Approval and external payment status remain separate facts

Capability profile image-pack-v1: packQuantity=1 · outputCount=3 · one immutable delivery · no split payouts

Excluded from this profile: routine revision rounds, source files, video, marketplace discovery

WHY MIDNIGHT

Public integrity without public terms

· Compact circuits decide who may move the order

· Phase and hashed commitments are re-queryable

· Price, brief, and files do not appear as ledger plaintext

· Both parties and an outsider can inspect the same public state

14 named order circuits in contract state (RECEIPTS.md)

reserve · accept · submitDelivery · approve · cancelReserved · decline

disputeBuyer · disputeMerchant · resolve · expire* · escalateUnreviewed

PROVEN vs TRUSTED

Dual-state, published honestly

WHAT IS PROVEN (execution)

Preprod: 4 contracts, 14 keys each

Local lane: 14 / 14 exercised

Preprod: reserve + accept proved
State tx + block re-queried

Source: RECEIPTS.md + Blockfrost query

WHAT IS NOT YET (acceptance)

Provider acceptance 0 / 6

Operation acceptance 0 / 14

Stripe capture / PaymentIntents: not yet

No live-payment claim in this deck

We publish both. Execution ≠ acceptance.

EVIDENCE

On-chain receipts you can re-query

Network	Midnight Preprod		
Contract	b653b13a8ca93308…d7fdc5818f		
Latest state tx	3c83ce2d175b46da…5c801828		
State block	3176417		
Canonical source hash	8c88091d26ad7771…974420ebe		
Deploy tx	96df7228ed2f5f1a…cbda7375e	Staged	7 + 7 keys, 2 txs

Query method: contractAction(address:) on the Blockfrost indexer

ROI · GTM

One measurable claim · one studio step

MEASURABLE ROI CLAIM

Replace private chat/email archives with a public re-queryable lifecycle record: phase + deliveryCommitment, without price or brief.

Measure in pilot: independent re-query pass/fail + minutes-to-evidence. No ROI % claimed today.

ONE STUDIO GTM STEP

One design-partner product-photo studio → invite-only order links to that studio’s existing buyers. No marketplace. No discovery build.

No design partner signed yet — this is the single distribution experiment.

CLOSE

What we ask for next

1. One design-partner studio conversation
2. One funded Preprod deal (reserve → approve) with wallet signatures
3. Independent re-query of phase + deliveryCommitment

Not a production launch. Not live payments. Not organizer acceptance.
